技术规格

Background:	Transcriptional regulator which participates in regulating the pre-mRNA splicing process. Seems to be involved in the regulation of RNA polymerase II (pol II). Functions in association with cyclin-dependent kinases (CDKs) and has a role in the second step of splicing. May be a candidate proto-oncogene in head and neck squamous cell carcinomas (HNSCC). Inhibited by the CDK-specific inhibitor p21.
Applications:	WB, IHC
Name of antibody:	CCNL1

Immunogen:	Synthesized peptide derived from human Cyclin-L1.
