技术规格

Background:	Lymphocytes proliferate and differentiate in response to various concentrations of different antigens. The ability of the B cell to respond in a specific, yet sensitive manner to the various antigens is achieved with the use of low-affinity antigen receptors. This gene encodes a cell surface molecule which assembles with the antigen receptor of B lymphocytes in order to decrease the threshold for antigen receptor-dependent stimulation.
Applications:	WB
Name of antibody:	CD19(Phospho-Tyr531)
Immunogen:	Peptide sequence around phosphorylation site of tyrosine 5

	31 (D-S-Y(p)-E-N) derived from Human CD19.
Full name:	CD19 molecule
Synonyms :	B4; CVID3
SwissProt:	P15391
WB Predicted band size:	61 kDa
WB Positive control:	COS7 cells lysates treated with Serum
WB Recommended dilution:	500-1000
