Target information

Symbol RNF11

Full namering finger protein 11SynonymsCGI-123; SID1669

Swissprot Q9Y3C5

Target Background

The protein encoded by this gene contains a RING-H2 finger motif, which is known to be important for protein-protein interactions. The expression of this gene has been shown to be induced by mutant RET proteins (MEN2A/MEN2B). The germline mutations in RET gene are known to be responsible for the development of multiple endocrine neoplasia (MEN).
