技术规格

Background: Applications:	a membrane. Annexin I protein has an apparent relati ve molecular mass of 40 kDa, with phospholipase A2 inhibitory activity. Since phospholipase A2 is required for the biosynthesis of the potent mediators of infla mmation, prostaglandins and leukotrienes, annexin I may have potential anti-inflammatory activity. ELISA. WB

Annexin I protein has an apparent relati ve molecular mass of 40 kDa, with phospholipase A2
