

兔抗 FKBP5 多克隆抗体

中文名称：兔抗 FKBP5 多克隆抗体

英文名称：Anti-FKBP5 rabbit polyclonal antibody

别名：FK506 binding protein 5; P54; AIG6; FKBP51; FKBP54; PPIase; Ptg-10

抗原：FKBP5

储存：冷冻 (-20°C)

宿主：Rabbit

反应种属：Human

相关类别：一抗

标记物：Unconjugate

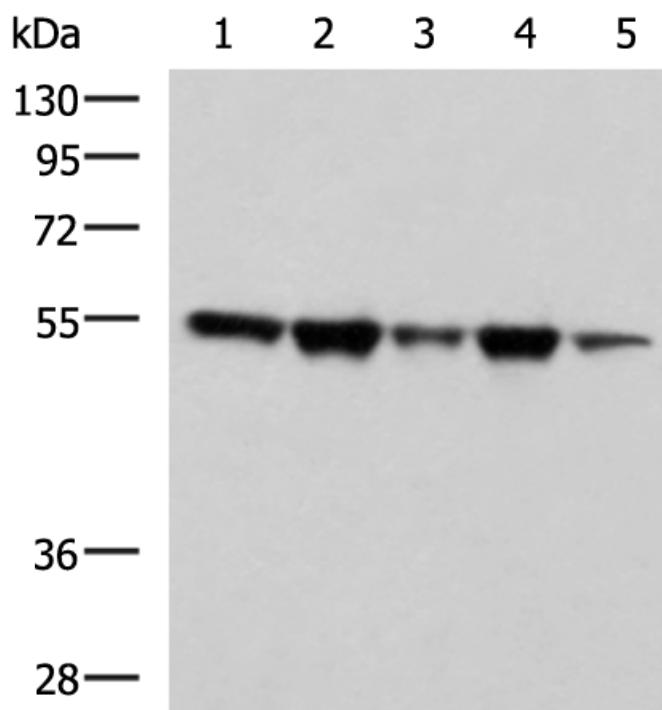

克隆类型：rabbit polyclonal

技术规格

Background:

The four human glycoprotein hormones chorionic gonadotropin (CG), luteinizing hormone (LH), follicle stimulating hormone (FSH), and thyroid stimulating hormone (TSH) are dimers consisting of alpha and beta subunits that are associated noncovalently. The alpha subunits of these hormones are identical, however, their beta chains are unique and confer biological specificity. Thyroid stimulating hormone functions in the control of thyroid structure and metabolism. The protein encoded by this gene is the beta subunit of thyroid stimulating hormone. Mutations in this gene are associated with congenital central and secondary hypothyroidism.

| | |
|------------------------------------|--|
| | dism and Hashimoto's thyroiditis. Alternative splicing of thi s gene results in multiple transcript variants. |
| Applications: | ELISA, IHC |
| Name of antibody: | TSHB |
| Immunogen: | Synthetic peptide of human TSHB |
| Full name: | thyroid stimulating hormone beta |
| Synonyms: | TSH-B; TSH-BETA |
| SwissProt: | P01222 |
| ELISA Recommended dilution: | 5000-10000 |
| IHC positive control: | Human tonsil |
| IHC Recommend dilution: | 40-200 |
