

## STAT6 抗原（重组蛋白）

中文名称：STAT6 抗原（重组蛋白）

英文名称：STAT6 Antigen (Recombinant Protein)

储 存： 冷冻（-20℃）

相关类别： 抗原

概述

Fusion protein corresponding to a region derived from 530-847 amino acids of human STAT6

技术规格

<b>Full name:</b>	signal transducer and activator of transcription 6, interleukin-4 induced
<b>Synonyms:</b>	STAT6B; STAT6C; D12S1644; IL-4-STAT
<b>Swissprot:</b>	P42226
<b>Gene Accession:</b>	BC075852
<b>Purity:</b>	>85%, as determined by Coomassie blue stained SDS-PAGE
<b>Expression system:</b>	Escherichia coli
<b>Tags:</b>	His tag C-Terminus, GST tag N-Terminus
<b>Background:</b>	The protein encoded by this gene is a member of the STAT family of transcription factors. In response to cytokines and growth factors, STAT family members are phosphorylated by the receptor associated kinases, and then form homo- or heterodimers that translocate to the cell nucleus where they act as transcription activators. This protein plays a central role in exerting IL4 mediated biological responses. It is found to induce the expression of BCL2L1/BCL-X(L), which is responsible for the anti-apoptotic activity of IL4. Knockout studies in mice suggested the roles of this gene in

	differentiation of T helper 2 (Th2) cells, expression of cell surface markers, and class switch of immunoglobulins. Alternative splicing results in multiple transcript variants.
