## 技术规格

Background	Based on immunoelectrophoresis and/or ELISA, the antibody reacts with whole molecule rabbit IgG. It also reacts with the light chains of other rabbit immunoglobulins. No antibody was detected against non-immunoglobulin serum proteins. The antibody has been tested by ELISA and/or sol id-phase adsorbed to ensure minimal cross-reaction with bovine, chicken, goat, guinea pig, Armenian hamster, horse, human, mouse, rat, and shee p serum proteins, but it may cross-react with immunoglobulins from oth er species.
Applications	1/ 2000-50000 for ELISA 1/ 200-2000 for Immunohisto/cytochemistry 1/ 5000-100000 for Western blotting with ECL substrates
