

山羊抗大鼠 IgG

中文名称: 山羊抗大鼠 IgG

英文名称: Goat Anti-Rat IgG

相关类别: 其他二抗

储 存: 冷冻(-20℃)

技术规格

Background	Immunoglobulin G (IgG),is one of the most abundant proteins in
	serum with normal levels between 9.5-12.5 mg/ml in adult blood.
	IgG is important for our defense against microorganisms and the
	molecules are produced by B lymphocytes as a part of our adapti
	ve immune response. The IgG molecule has two separate function
	s; to bind to the pathogen that elicited the response and to recru
	it other cells and molecules to destroy the antigen. The variability
	of the IgG pool is generated by somatic recombination and the n
	umber of specificities in an individual at a given time point is esti
	mated to be 1011 variants.
Applications	1/500-2000 for ELISA
