

## FITC 标记兔抗狗 IgG

- 中文名称: FITC 标记兔抗狗 lgG
- 英文名称: FITC-conjugated Rabbit Anti-Dog IgG
- 相关类别: 荧光标记二抗
- 储 存: 冷冻 (-20℃)
- 标记物: FITC

## 技术规格

| Background:   | Immunoglobulin G (IgG) is one of the most abundant proteins i<br>n serum with normal levels between 8-17 mg/mL in adult blood<br>. IgG is important for our defense against microorganisms and t<br>he molecules are produced by B lymphocytes as a part of our a<br>daptive immune response. The IgG molecule has two separate f<br>unctions, to bind to the pathogen that elicited the response an<br>d to recruit other cells and molecules to destroy the antigen. T<br>he variability of the IgG pool is generated by somatic recombin<br>ation and the number of specificities in an individual at a given<br>time point is estimated to be 1011 variants. |
