技术规格

Background:	Pyruvate dehydrogenase (PDH) is a mitochondrial multien zyme complex that catalyzes the oxidative decarboxylation of pyruvate and is one of the major enzymes responsible for the regulation of homeostasis of carbohydrate fuels in mammals. The enzymatic activity is regulated by a phosp horylation/dephosphorylation cycle. Phosphorylation of PD H by a specific pyruvate dehydrogenase kinase (PDK) resu Its in inactivation. Multiple alternatively spliced transcript
	variants have been found for this gene.
Applications:	ELISA, IHC
Name of antibody:	PDK1

Immunogen:	Synthetic peptide of human PDK1
Full name:	pyruvate dehydrogenase kinase 1
SwissProt:	Q15118
ELISA Recommended dilution:	5000-10000
IHC positive control:	Human liver cancer and human ovarian cancer
IHC Recommend dilution:	25-100
