技术规格

Background:	This gene encodes a protein that may be involved in the presentation of the laminin-binding O-linked carbohydrate chain of alpha-dystroglycan (α-DG), which forms transmembrane linkages between the extracellular matrix and the exoskeleton. Some pathogens use this O-linked carbohydrate unit for host entry. Loss of function compound heterozygous mutations in this gene were found in a human patient affected by the Walker-Warburg syndrome (WWS) phenotype.
Applications:	ELISA, WB, IHC
Name of antibody:	POMK

Immunogen:	Fusion protein of human POMK
Full name:	protein-O-mannose kinase
