技术规格

Background:	This gene encodes a protein with two C2H2 zinc finger motifs and a score-and-three (23)-amino acid peptide r epeat (STPR) domain. The STPR domain of the encoded protein binds to double stranded DNA and may also c ontain a nuclear localization signal, suggesting that this protein interacts with chromosomal DNA. Alternatively s pliced transcript variants encoding multiple isoforms ha ve been observed for this gene. [provided by RefSeq, J an 2011]
