技术规格

Background:	This gene encodes a mosaic protein that belongs to at least two families: the vacuolar protein sorting 10 (VPS10) domain-containin g receptor family, and the low density lipoprotein receptor (LDLR) family. The encoded protein also contains fibronectin type III repe ats and an epidermal growth factor repeat. The encoded prepropr otein is proteolytically processed to generate the mature receptor, which likely plays roles in endocytosis and sorting. Mutations in t his gene may be associated with Alzheimer's disease.
