

## 羧基磁珠

中文名称： 羧基磁珠

英文名称： Carboxyl magnetic beads

相关类别： 抗体相关支持试剂

储 存： 冷藏（2-8℃） 不可冻存

### 概述

Carboxyl magnetic beads are superparamagnetic nano magnetic beads, which surface was carboxyl functional groups. After activation (eg. Activated by EDC and Sulfo-NHS) it can conjugated with primary amine from Nucleic acid, Protein, Antibody or other molecular, form stable amide bond. The coupled beads can be separated from the solution by Magnetic separation device, and used for downstream purification and separation tests in directly.

### 技术规格

<b>Diameter</b>	φ0.5 μm
<b>Concentration</b>	50mg beads/ml
