技术规格

Background:	Metallocarboxypeptidase that mediates both deglutamy lation and deaspartylation of target proteins. Catalyzes the deglutamylation of polyglutamate side chains gen erated by post-translational polyglutamylation in proteins such as tubulins. Also removes gene-encoded polyglutamates or polyaspartates from the carboxy-terminus of target proteins such as MYLK. Does not show dety rosinase or deglycylase activities from the carboxy-terminus of tubulin.
Applications:	ELISA, WB
Name of antibody:	AGBL3
Immunogen:	Fusion protein of human AGBL3
